**This response and amendment is filed in response to the Office Communication  
Dated 8/24/2006. This request an extension of time for 2 months.**

**IN THE CLAIMS**

1. (currently amended) A hand-held ergonomic reflexology device comprising: a handle, defined by an inner edge, lower edge, first end and opposite second end; a thumb support member being integrally connected to the first end of the handle in a substantially perpendicular relationship to a longitudinal axis of the handle at first end and protruding outwardly therefrom to a sensor tip portion at its apex point; the sensor tip portion being adapted to apply direct pressure to predetermined treatment areas on the body; and the thumb support member being dimensioned to support the circumference of a user's thumb, the thumb member transversely against longitudinal axis)
2. (Original) The hand-held device of claim 1 wherein the handle is cylindrical.
3. (currently amended) The hand-held device of claim 2 wherein: the handle and the thumb support member being dimensioned to fit within a user's hand; the thumb support member has substantially a partially enclosed elliptical shape being defined by an upper surface area disposed opposite a lower surface area, an inner curved peripheral edge, and an outer curved peripheral edge; the upper surface area having a circumference dimensioned to accommodate the thumb of the user's hand; the outer curved peripheral edge extending from the tip portion proximally near the upper end of the outer edge of the handle; and the inner curved peripheral edge extending from the tip portion to an arc therein, whereby the hand-held device have a structure resembling a small hand gun.
4. (Original) The hand-held device of claim 3 wherein the upper surface area of the
